TECHNICAL SKILLS

AI & LLM Engineering: RAG, Vector Stores (OpenAI file_search), Prompt Engineering, LLM-as-a-Judge / Agentic Evaluation, Chain-of-Thought Prompting, Multi-Agent Workflows, OpenAI API, GPT-4o Vision, LangChain, LangGraph, Groq, Hugging Face, PyTorch

Backend Engineering: Node.js, Express.js, Python, REST APIs, Server-Sent Events (SSE), Webhooks (HMAC / idempotency), Auth (OAuth, JWT, OTP, HTTP-only cookies), Mongoose ODM, RBAC

Frontend Engineering: React 19, Next.js (App Router), React Router v7, Vite, Tailwind CSS, Axios Interceptors, KaTeX, Core Web Vitals / Lighthouse optimization

Data & Databases: MongoDB Atlas, Aggregation Pipelines, BulkWrite, Schema Design & Zero-Downtime Migrations, Vector Databases, SQL, ETL Pipelines, Pandas, NumPy, Scikit-learn

Cloud, DevOps & Product: AWS (ECS, S3, CloudFront, ALB, CodeBuild, CodePipeline, Secrets Manager, IAM), GCP (Vertex AI), CI/CD, Git, Multi-Tenant B2B SaaS, Google Tag Manager, Razorpay Payments

EXPERIENCE

EdviseMe **May 2026 – Present**

Full-Stack AI Engineer (functioning as Tech Lead) | Bengaluru → Remote, India

- Architected a deterministic "LLM-as-a-Judge" grading engine (OpenAI Vector Store file_search + Chain-of-Thought), turning an expensive, hallucination-prone "Solver" into a low-cost "Evaluator" that eliminated math and score errors while cutting API cost and latency.
- Audited 6,368 records with a read-only GPT-4o Vision script, surfacing a ∼55% data-integrity failure rate (3,490 null model answers, 3,605 null correct answers) and delivering a report that prevented live AI grading failures.
- Rebuilt payments from insecure client-side fulfillment into a server-authorized Razorpay webhook pipeline with HMAC validation and idempotent compare-and-set logic, closing a privilege-escalation exploit that let users self-grant top-tier access.
- Built full-stack revenue/entitlement infrastructure — Geo-IP INR/USD pricing, tiered subscriptions on a 3-hour rolling window, a token ledger, and a referral + admin dashboard that passed a 21/21 automated security test suite.
- Owned MongoDB data architecture: seeded the CBSE curriculum (48 subjects, 604 chapters, 3,495 subtopics) into Atlas and normalized 572+ corrupted documents across 1,244 legacy paths via zero-downtime BulkWrite.
- Acted as de facto Tech Lead: managed junior engineers, set sprint protocols, secured elevated AWS IAM access, and ran a 2-hour end-to-end architecture Knowledge Transfer (KT) session for incoming leadership; 380+ GitHub commits in 2026.

ARMAX Solutions **May 2025 – Apr 2026**

Founder & AI Architect (B2B GenAI Consultancy) | Remote

- Founded a B2B generative-AI consultancy delivering LLM prototypes and advanced MERN-stack architectures for clients.

HERE Technologies (Volkswagen Group) **Jun 2024 – Jul 2024**

Web Scraping Intern | Remote

- Automated large-scale geospatial data extraction with Python (Scrapy, Requests) to improve the spatial accuracy of downstream location services.

Plasmid Innovation Ltd. **May 2024 – Jun 2024**

Data Science Intern | Remote

- Built data-cleaning pipelines and trained predictive ML models (Pandas, Scikit-learn, NumPy) to identify global purchasing trends.

KEY PROJECTS & OPEN SOURCE

- **Intelligent Incident Parser** — Automated parsing engine enforcing strict JSON-schema constraints to achieve 1–2 second inference latency for unstructured system alerts.
- **Weather Image Classification** — Fine-tuned a PyTorch ResNet-101 model to 92% accuracy across 11 classes, integrating XGBoost and a Genetic Algorithm for optimized feature selection and inference speed.
- **Text-to-Image Generator** — Generative image pipeline within a 250+ contribution 2026 GitHub portfolio spanning LangGraph agentic workflows and automated AWS CI/CD pipelines.

EDUCATION & CERTIFICATIONS

University of Petroleum and Energy Studies (UPES) **Aug 2021 – May 2025**

B.Tech in Computer Science and Engineering (AI & ML) | Dehradun, India

Certification: Microsoft Certified: Azure AI Engineer Associate (AI-102), 2024
